

Vocational Training Need Survey

Facts and Statistics

November 25, 2018

About the Report

This survey generates data to identify what vocational trainings need to be developed in Chin State. The data is based on face-to-face interview with more than 380 participants from 6 wards in Hakha, and 10 villages in Hakha township. The interview is conducted using structured questionnaire.

According to the finding, the vast majority of respondents (about 70%) able to clearly identified their long-term career aspiration. However, 95% of them said they still need to develop their abilities and knowledge to achieve their career goals.

Respondents Profile

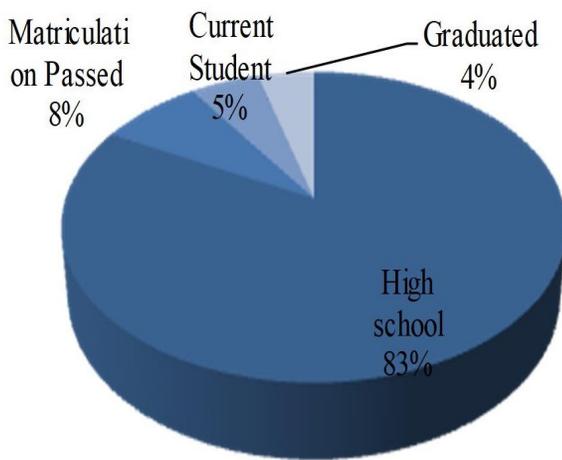

Figure 1. Respondents' Educational Background

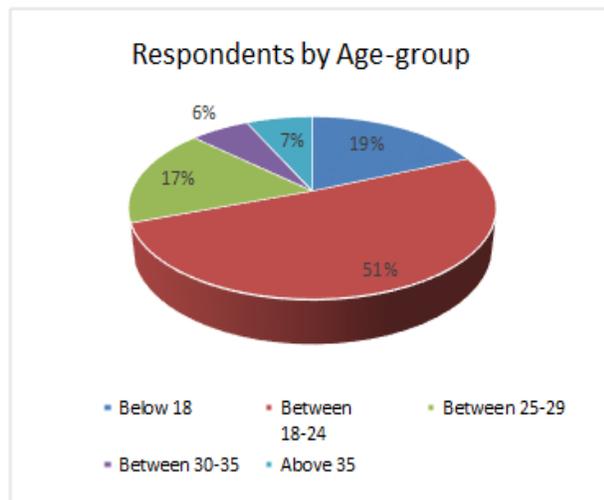

Figure 2. Proportion of Respondents by Age-group

Of 402 total respondents, 196 (49%) are women and 206 (51%) are men.

Figure 1, 2, and 3 present a breakdown of information on respondents' education, occupation, and age backgrounds.

As in Figure 2, most of respondents were above the age of 18. However, majority of the (83% as in figure 1) didn't get their matriculation diplomas. In addition, just a few number of respondents (that is 15%) are currently enrolled in Universities.

The interesting part of the figure is that almost half of total respondent (43%) were self-employed, which is 6% higher than the number of respondents who are unemployed at the time of interview. However, 95% of total respondent replied "no" when they were asked if they have already gained necessary skills and knowledge for their long-term career goals.

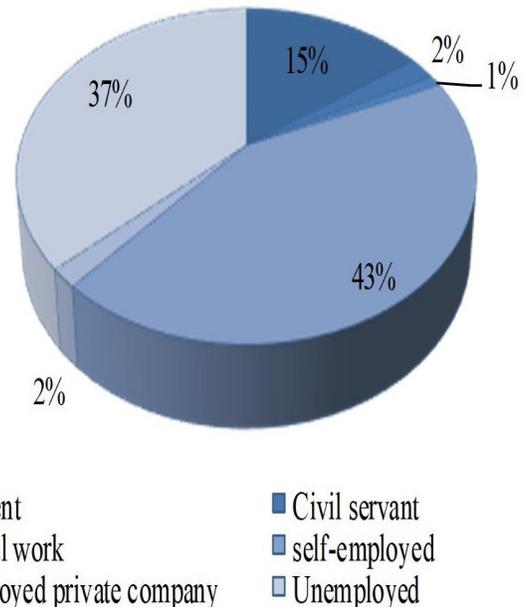

Figure 3. Proportion of Respondents by Occupation

Top 11 Trainings Chosen by Respondents

Figure 4. List of In Demand Trainings

The above graph presents 11 trainings in demand.

Respondents were asked to list top three trainings of their choice that would help them achieve their long-term career goals, and asked them to pick up 1 among their chosen top three as first priority.

As shown in the figure, in high demand trainings includes tailor training (19%), electric wire installation (12%), basic computer training (10%), cycle repair training (9%), and beauty salon training (7%) respectively.

Additionally, a large proportion of participants (95%) said that they need to develop their skills and knowledge in order to achieve their long-term career goals although a considerable number of respondents (more than 40%) are already employed. This suggests that in high demand trainings presents in the above graph are really in high demand not only for unemployed Chin youth but also for already employed Chin youth .

The figure suggests that providing the above trainings will be of a great benefits to Chin youth as it will help them achieve their long-term career aspiration.
